YUVARLAK BETONARME ÇELİK ÇUBUĞUNUN

1 m (birim metre)

AĞIRLIĞININ PRATİK HESAPLANMASI

1 METRE İNŞAAT DEMİRİ

AĞIRLIK FORMÜLÜ : $0.00617 \times d^2$

d = Demir çapı mm olarak

Örnek:

8 mm demir için $0.00617 \times 8^2 = 0.395$ kg/m

12mm demir için $0.00617 \times 12^2 = 0.888$ kg/m
